

This document will help you configure SLDFItemsInShops mod pack by tharbad08.

BEXT version: <https://github.com/tharbad08/SLDFItemsInShopsBEXT/releases>

BEXT EP version: <https://github.com/tharbad08/SLDFItemsInShopsBEXT-EP/releases>

Other mods:

Bigger Space: Allows you to travel to the Canopus Magistracy and border systems of Marik and Liao in the campaign. <https://github.com/tharbad08/BiggerSpace/releases/>

Since all parts of this mod pack are json, configure means either deleting files or telling motek not to load the entire folder.

SLDFItemsInShops

This is the base mod.

See in folder Readme for what it does.

Basically it adds SLDF and normal items to shops. Both in campaign and career mode.

mod.json has instructions inside it if you want to change things.

Options:

- 1) Delete certain files in "starsystem" dir so you'll see less item in the Arano restoration stores.
See Readme for recommendations.
- 2) Comment lines no.:
 1. 14 will remove SLDF era mechs from stores.
 2. 16 will remove SLDF era weapons from stores.
 3. 18 will remove all mod items from Arano Restoration shops.
 4. 22 will remove the double effect. The mod double the number of items shown in all shops. So you'll see around 1/3 less items in shops.
 5. 24 will remove mod items from stores with planet tags like battlefield, research etc.
 6. 26 will remove mod items from Faction stores.
 7. 28 will remove SLDF era upgrades from stores.

MoreArmor

Raises mechs max possible armor to 184% of the vanilla max.

Either you use this mod or not. Doesn't require SLDFItemsInShops.

HeatWeightJJ

BEXT version doesn't include the following: Jump Jets, Engine heatsinks. **You can add "CustomComponents" mod from EP if you want BEXT EP version. "CustomComponents" mod doesn't require any other mods so it should be easy to add.**

SLDFItemsInShops add-on. Will not work without.

This is a cheat mod that gives overpowered items: Jump Jets, Engine heatsinks, double and triple heatsinks, TTS (gives mech an accuracy bonus), items that take space and lower weight, Endo and Ferro versions that lower weight. They do cost more.

Options:

- 1) Comment line 17 in mod.json to remove Ferro and Endo modifications
- 2) Manually edit files in items folder to remove items from stores.

Will there be a Clan version? So far there're only clan heatsinks.

Maybe. I'm thinking about that. But you'll have to take these item off clan mechs which will make them even more powerful.

Oh, yes. Clan mechs have even better heatsinks with this mod. Deal with it or delete "Gear_HeatSink_Clan_Double.json" in heat folder.

Upgrades2SLDFItems

BEXT EP only.

Allows you to buy and install built-in items. All item either weight more, take more space and/or do less.

SLDFItemsInShops add-on. Will not work without.

VanillaZeroItems

BEXT EP only. **You can add “CustomComponents” mod from EP if you want to use this mod. “CustomComponents” mod doesn’t require any other mods so it should be easy to add.**

Requires all vanilla DLCs.

Allows you to buy and install built-in items from the base game that have 0 cost. I used existing items to estimate costs. All item either weight more, take more space and/or do less. You can open each of the modded items file to see how I estimated the cost.

SLDFItemsInShops add-on. Will not work without.

MoreArmor2CampaignMechs and MoreArmor2CampaignOpFor

SLDFItemsInShops, HeatWeightJJ (EP version) and MoreArmor add-on. Will not work without.

Included inside the BEXT only version since it doesn’t require Upgrades2SLDFItems. "Enabled" in mod.json is set to false by default. You’ll need to set it to true. DO IT only after you copied HeatWeightJJ (EP version).

Adds new items to campaign mechs (Starting campaign mechs, SLDF outpost and Kamea personal mechs) and to certain OpFor campaign mechs (No list, prepare yourself).

SimConstants

This mod changes game setting to allow all previous mods to work better and make BEXT less grindy (requires less time to get better mechs, better pilot, etc.).

Same for both BEXT and BEXT EP versions.

Files and changes:

StreamingAssets/data/constants/CombatGameConstants.json

(Optional) Changes Sensor Lock: Will remove 3 evasion pipe instead of 2.

I like to play with it. Just try to avoid enemies with Beagle Active Probe (BAP).

Delete the file to revert to default.

StreamingAssets/data/constants/MechStatisticsConstants.json

(Mandatory) Changes the mech statistics window in the mech lab to accommodate the new possible value range added by MoreArmor and HeatWeightJJ. Values: Max armor (MaxArmorFactor), Max movement (MaxSprintFactor), Max damage (MaxStockFirepower).

SimConstants/StreamingAssets/data/shipUpgrades/

To remove, just delete the files you don't want.

Makes ship upgrades better. All of them are optional

Doubles the effect of Medbay, Mechbay and Rec (moral bonuses):

argoUpgrade_medBay*: Medbay files

argoUpgrade_mechBay*: Mechbay files

argoUpgrade_rec*: Moral files.

All of these are cheats.

Training module doubles the upper limit:

Each Training module upgrade allows your pilot to gain X xp per day up to Y limit.

Ex: the first upgrade will give your pilots 20 xp per day up to 10,000 limit.

With these modded file the limit was doubled. Ex: 20,000 for the first upgrade.

These edit are meant to save you time when training you B team. I think it make the game less grindy.

StreamingAssets/data/simGameConstants/SimGameConstants.json

Mandatory:

DefaultShopMaxInventory: Max number of items in stores.

DefaultShopMaxSpecials: Max rare items you will see in stores.

Less Grind:

ContractPricePerDifficulty: Max salary for contracts, per ½ skull.

ContractFloorSalaryMultiplier: Min salary you'll get is ContractFloorSalaryMultiplier *

ContractPricePerDifficulty. Or 296,000. But BEXT is doing something to these numbers so it doesn't always work according to these settings.

ContractFloorSalvageBonus: After min salvage is calculated, this number is added to the salvage you can't choose.

MechScrapModifier: Scrapping a mech part will give you 20% of its value (Vanilla is 8%).

ShopSellModifier: Selling items will give 20.48% of their value (Vanilla is 10.24%).

LikedRepPaymentAdjustment, FriendlyRepPaymentAdjustment,

HonoredRepPaymentAdjustment: Based on your standing with that faction, they'll pay you

more by this factor. i.e.: Being “Liked” will get you 20% more (Vanilla is 5% more).
IndifferentRepShopAdjustment, LikedRepShopAdjustment, FriendlyRepShopAdjustment,
HonoredRepShopAdjustment: How much more or less you’ll pay in stores based on your
standing with that faction. i.e.: Being “Honored” will get you 20% discount (Vanilla
is 10%)

DefaultRoninHiringChance: Your chances of finding a Ronin pilot in the Hiring Hub. Added
10%.

MaxContractsPerSystem: Max number of contracts in a system.

ContractRenewalPerWeek: How many new contracts will be generated each week.

Cheats:

MaxBreadcrumbsPerSystem: Max contracts with paid travel per system.

StartingCBills: Story starting money.

GameLength: Career mode time in days till score screen. Vanilla is 1200, changed to 2400.
I think that 1200 is too short.

MaxSalvagePotential: Max number of salvage items per mission. Vanilla is 32, changed to
48.

DefaultSalvagePotential: Starting salvage potential. Part of the salvage calculation. More
gives more salvage. Both chosen salvage and total. Vanilla is 8, changed to 10.

MinSalvagePotential: Minimum salvage. Vanilla is 0, changed to 2
